Fall 2021

Name of Faculty Member being Observed Dan Sewell Date Oct 21<sup>st</sup> 2021

Context for Observation (e.g., lecture, lab, journal club) Biostat Methods I

Title of Presentation (if applicable) One Sample inference / One sample Inference Lab

	strongly agree						not applicable
		strongly disagree	1	2	3	4	
1. Demonstrated thorough knowledge of the subject area.	(6)	5	4	3	2	1	Na
2. Actively involved learners.	(6)	5	4	3	2	1	Na
3. Provided appropriate support materials (e.g., handouts).	(6)	5	4	3	2	1	Na
4. Covered an appropriate amount of material for the time allotted.	(6)	5	4	3	2	1	Na
5. Asked questions appropriate for the level of the learner.	6	(5)	4	3	2	1	Na
6. Responded to questions in a clear and non-threatening way.	6	(5)	4	3	2	1	Na
7. Organized content logically.	6	(5)	4	3	2	1	Na
8. Used up-to-date materials and references.	(6)	5	4	3	2	1	Na
9. Presented content at an appropriate level of complexity.	6	(5)	4	3	2	1	Na
10. Presented conflicting views (if appropriate).	(6)	5	4	3	2	1	Na
11. Effectively uses available time.	(6)	5	4	3	2	1	Na

12. Leaves enough wait time for a response to questions.	<input checked="" type="radio"/> 6	5	4	3	2	1	NA
13. Uses eye contact effectively.	<input checked="" type="radio"/> 6	5	4	3	2	1	NA
14. Gives appropriate time to topics covered.	<input checked="" type="radio"/> 6	5	4	3	2	1	NA
15. Seems interested in teaching.	<input checked="" type="radio"/> 6	5	4	3	2	1	NA

STRENGTHS:	SUGGESTIONS FOR IMPROVEMENT:
<ul style="list-style-type: none"> <li>Students feel comfortable asking questions which made the presentation more of a discussion, which is a really good thing.</li> <li>Ian did a nice job presenting both frequentist and Bayesian approaches for the Bayes rule inference. It was one simple inference. It was nice to see similarities and differences between frequentist and Bayesian approach for the same example.</li> </ul>	<p>- Some of the topics were presented too abstractly. For example, when you were talking about the prior, you might talk more about the infant birthweight data and say that the <math>\bar{x}</math> on the right hand side is the average birthweight we observed from our sample.</p> <p>Similarly when you were talking about improper prior distributions, using <sup>using</sup> too low or too high infant birthweights could <del>make</del> make it easier <del>to</del> to understand the concept.</p>

15. Seems interested in teaching.	(6)	5	4	3	2	1	NA

STRENGTHS:	SUGGESTIONS FOR IMPROVEMENT:
<p>Really enjoyed the diagnostics questions / interactive "lab". In particular, the use of both graphical methods and tests, with comments on the pros and cons of each.</p> <p>I like the section on standardized regression -- I think this is an important topic that is often overlooked in courses like this. For example, I've had students say that time is not important because <math>\beta = 0.01</math>, even though time is measured in days (default in R for</p> <p>Great job fielding (and fostering!) questions. Very interactive class, which is wonderful to Dan is an excellent instructor, and overall seems to be doing a great job with this</p>	<p>Personally, with regard to diagnostics, I think it's worth emphasizing that the mean relationship is much more important than variance/distribution of the error. If your mean model is correct but variance/distribution is wrong, your estimates/predictions are usually OK (if suboptimal). If you got the mean model wrong, it doesn't matter. Would have been nice to see a real-data example with coefs of partial determination.</p> <p>Maybe you were going to get to this next time, but with regard to interactions, I'd just say that it's very much worth the time to take output from a model with an interaction, and have students calculate the slope (or treatment effect) in each group. Also, to have them work on a model involving an interaction between two continuous predictors. I've just had way too many students in survival tell me that treatment doesn't have an effect because its main effect is not significant in a model with a Trt*Age interaction. OK, it's not significant...IN</p>

Name of faculty member being observed: DANIEL PEWELL Date: 04/25/2023

Course Number and Name: BIOSTAT METHODS II BIOS:5720

Format of Course:  Lecture  Discussion  Lab  Group Work  Seminar  Online

Focus of Lecture: VARIABLE SELECTION / MODEL SELECTION CRITERIA

Evaluation Scale: (6) Strongly Agree (5) Agree (4) Slightly agree (3) slightly disagree (2) disagree (1) strongly disagree (NA) Not Applicable

### **Design**

The goals and objectives are appropriately defined in the Syllabus

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Design of the web content is well organized (online course)

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

### **Content**

Instructor allows sufficient time for topics covered

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

The material is up-to-date and relevant

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Instructor demonstrates thorough knowledge of subject

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Instructor presents content at an appropriate level of complexity

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Instructor organizes content logically

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

### **Delivery**

Instructor shows enthusiasm for subject(s)

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Instructor effectively uses technology to deliver course materials (e.g., PowerPoint, ICON, etc.)

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Course materials are effective (e.g. ICON, handouts, etc.)

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Instructor organizes course web content well

6	5	4	3	2	1	NA
---	---	---	---	---	---	----

### **Communication and Interaction between Instructor and Students**

Instructor actively involves learners

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Instructor leaves enough time for a response to instructor questions

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Instructor responds to students questions appropriately

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Instructor uses eye contact effectively

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

I will have access to  
the site next.

### **Assessment of Student Learning**

Instructor clearly communicates the nature, duration, and due date of planned assessment methods

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

This instructor provides high quality instruction

(6)	5	4	3	2	1	NA
-----	---	---	---	---	---	----

Approximate # of students in teaching environment: ~12

**Instructional Strengths**

Eye contact (good use)

Speaks clearly - Made the main points stand out -

Clearly enjoys Bayes Methods :-

Dan is fantastic! -

**Comments and/or Suggestions for Improvement**

No suggestions!

Approximate # of students in teaching environment: 9

### **Instructional Strengths**

It was helpful to give the hemoglobin, favorite shoe brand, and the other survey example to illustrate the theoretical content in a more applied example.

### **Comments and/or Suggestions for Improvement**

- When discussing  $(X'X)^{-1}(X'Y)$  for the intercept-only model, it would be helpful if you wrote it up so students could visualize it.
- Perhaps this was due to the lecture I attended, which I felt was a bit too focused on the theory. I think, especially for those students who are planning to graduate after the MS degree and will work on more applied jobs, there was some room for giving more real-world, applied examples.

STRENGTHS:	SUGGESTIONS FOR IMPROVEMENT:
<ul style="list-style-type: none"> <li>- It was obvious that students feel comfortable asking questions.</li> <li>- It may help <del>to explain</del> to explain the big picture at the very beginning and at the very end of the lecture. For example where would the model comparison be needed.</li> <li>- Dan is very much interested in teaching this course.</li> </ul>	<p>→ Avoid saying things like "this is very trivial" or "this is very easy". Some students may not find that concept easy.</p> <p>- As one of the students pointed out it was confusing from your hand-writing whether you were writing "Ms" or "M1". I really think including those steps in your <u>lecture notes</u> would help prevent that. Providing more comprehensive lecture notes early in advance also enables students to study them in advance of the lecture. You could also put the steps for the BF calculation and the steps for solving the problem in the plot.</p>
